

Stem Cell Extraction Testimonial

- Subject is a 52-year-old male in Seattle, Washington, USA recovering from a stroke with several pre-existing health conditions (diabetes and on dialysis).
- Started on LifeWave X39 March 17th, 2020.
- Had Stem Cell Extraction Procedure 63 days later on May 20th.
- Based on his age and existing health conditions they expected to see a Live cell concentration under 50% after the isolation process.
- Doctors and staff were amazed to see that he had 98% Live Cells and only 2% Dead after the isolation process.
- This is the highest live/dead ratio the clinic ever has seen... after doing 1,000's of these procedures.
